AthenaNet Biweekly Release Notes December 5, 2024

Updates...

- [Magic Words for Weight](#)
- [See Problem Onset and Deceased Age in Family History](#)
- [UnitedHealthcare Point of Care Assist \(POCA\) Features Will Be Removed on December 2, 2024](#)
- [Update to Clinical Provider Field Name on Order Documents](#)
- [Updated Clinical Evidence Labels for Suspected Diagnosis Gaps](#)
- [Updated Layout of Delete Diagnosis Button](#)
- [Athena Dental](#)

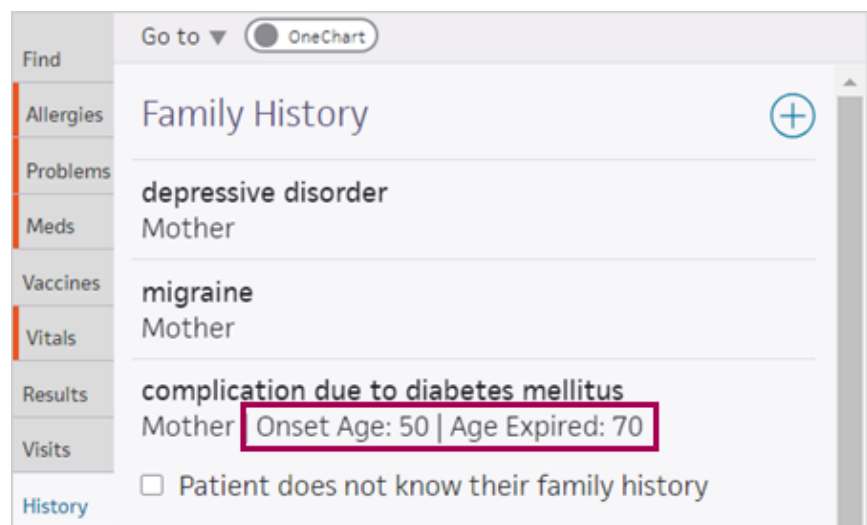

Magic Words for Weight

You can now use the {{PATIENT_VITALS_WEIGHT}} magic word to output the patient's most recent weight and the units of the weight (e.g., 150 kg/g/lbs/etc.) in clinical paper forms.

You can also use the {{PATIENT_VITALS_WEIGHT_DATE}} magic word to output the date that the weight was measured in clinical paper forms.

See Problem Onset and Deceased Age in Family History

In the Family History subsection of the patient chart, you can now see the family member's age at the onset of a problem and the age at which the family member died (if applicable) without clicking the problem.

The screenshot shows the 'Family History' section of the AthenaNet interface. On the left is a sidebar with navigation links: Find, Allergies, Problems, Meds, Vaccines, Vitals, Results, Visits, and History. The main content area is titled 'Family History' and contains a list of conditions and family members. The conditions listed are 'depressive disorder', 'migraine', and 'complication due to diabetes mellitus'. The family member listed is 'Mother'. The 'Onset Age' and 'Age Expired' fields are highlighted for 'complication due to diabetes mellitus'.

Condition	Family Member	Onset Age	Age Expired
depressive disorder	Mother		
migraine	Mother		
complication due to diabetes mellitus	Mother	50	70

☐ Patient does not know their family history

UnitedHealthcare Point of Care Assist (POCA) Features Will Be Removed on December 2, 2024

UnitedHealthcare will disable the POCA functionality on December 2, 2024 due to low utilization and use the athenaPayer Moment of Care Connections (MoCC) service instead. The existing MoCC functionality will not be impacted by this decommissioning and will remain accessible for the Medicare & Retirement (M&R) lines of business. Real-time benefit check will also not be affected.

Update to Clinical Provider Field Name on Order Documents

Previously, the recipient provider field for orders was named differently in the Assessment & Plan (**Send to**) and in the document view of the order (**Clinical provider**).

This change renames the **Clinical provider** field to **Send to** in the document view of the order to match the equivalent field name in the A&P:

Diagnosis	To add a diagnosis, go to the encounter .
ICD-10	To add an ICD-10 code, please add a diagnosis first.
Decline	<input type="checkbox"/>
Send to	 RECEIVER

If a clinical provider is not automatically selected in the order document, click the plus icon  to search for a clinical provider.

Updated Clinical Evidence Labels for Suspected Diagnosis Gaps

Now, instead of labeling clinical evidence by the code system (for example, CPT and ICD-10), the Patient Risk dashboard labels evidence by the type of data:

Suspected Diagnoses (2)

These clinically inferred diagnoses have not been clinically verified. They have been in Schedule an appointment to determine whether these diagnoses are valid.

CMS-HCC 96 (v24): SPECIFIED HEART ARRHYTHMIAS

Procedure

93284: PRGRMG EVAL IMPLANTABLE IN PERSON MULTI LEAD DFB
Humana: EDRIS BASEL MD, 08/23/2024

CMS-HCC 108 (v24): VASCULAR DISEASE

Diagnosis Code

I77.1: Stricture of artery
HUMANA: RADIOLOGY INC, 05/12/2022

See the following table for the new evidence labels:

Previous label	New label
NDC	Medication
ICD-10 or ICD-9	Diagnosis Code
LOINC	Result / Measurement
CPT	Procedure
HCPSC	Procedure / Equipment
ICD-10-PROC	Procedure

Updated Layout of Delete Diagnosis Button

In the Assessment & Plan (A/P) section of the encounter, we added more separation between the **Delete Diagnosis** button and the other buttons on diagnosis cards. This change is intended to help prevent accidentally clicking the button.

- Previously:** The buttons on the diagnosis card were evenly spaced.

- Now:** We added a vertical bar and additional spacing between the **Add Order** and **Delete Diagnosis** buttons.
